

ALEXANDRIA CONTROLLER

An Alexandria Controller license allows you to manage, update, and backup multiple databases on a single machine. It saves time and resources for IT personnel, while still allowing each school to maintain their autonomy.

Benefits of Controller:

- Ability to update, backup, and maintain all autonomous library databases at once from a single machine
- More convenient for IT personnel – no need to travel from location to location
- Librarians still maintain control over their own distributed catalogs
- Ability to search each school, group of schools, or district all at once

Organize and simplify your catalog when you set up your separate databases with the Alexandria Controller
